

Church Donation Tracker Web App

Church Donation Tracker Web App

Personal Project | React, Firebase, HTML/CSS, JavaScript

I designed and built a web-based Church Donation Tracker to help church members conveniently manage and track their donations.

The app includes user authentication, allowing individuals to create personal accounts, securely log in, and record their giving history.

I used React for the frontend and Firebase for both authentication and database storage.

This project reflects my ability to create real-world applications using modern web technologies, as well as my interest in building tools that serve communities.
